

SmartScience Dx Cohort

Approximately 195,000 purposefully curated and patient-consented serum samples with optimum documented collection, transport, and storage (no freeze/thaw cycles)

Your path to saving time and money with population scale bio-specimens and data

- Retrospective prospective clinical studies without enrollment on demand
- Genetic data can be generated to correspond with the database
- mRNA, genomic, and protein-based studies can be achieved
- Validate your current studies quickly and more cost effectively

Sample Origin Includes

- Multiple disease states with longitudinal data across thousands of patients
- Designed to enable biomarker discovery and rapid clinical trials without enrollment and with reduced collection expense
- Our samples can be used for genomic and proteomic-based studies
- Preparing for monetization
- "Clinical Trial in a Box"
- Multiple peer-reviewed publications derived from this cohort

In-depth validation data with all specifications can be provided upon request.

- Date and time of draw
- Phlebotomist
- Date and time of spin down
- Date of receipt in laboratory
- Condition on receipt (on ice at correct ship temperature)
- Date at aliquot
- Sample quality (hemolyzed, icteric, chylomicrons, etc.)
